

Cardiology Review

Price: Full - \$580 / Short - \$485
Register: (866) 611-5599 or www.AmericanSeminar.com
**Special Association accreditation may vary. See website.*

Hypertension: Management Guidelines for Primary Practice - Jennifer Brull, MD and Mark C. Houston

Set appropriate blood pressure (BP) goals based on current guidelines; Obtain accurate in-office BP measurements; Counsel patients with hypertension about lifestyle modifications; Explain the antihypertensive effect of proteins; Recommend supplements that may effectively reduce BP.

FP 64 - 30

Heart Failure/Syncope - Liviu Klein, MD and John Lacy Sturdivant, MD

Summarize the results of studies comparing the efficacy of available drugs for the treatment of patients with HF; Explain the pathophysiology of congestion in HF; Provide the option of pulmonary artery hemodynamic monitoring to guide treatment of patients with HF; Diagnose syncope based on directed history, complete physical examination, and appropriate testing; Use tools to assess the short- and long-term risk for recurrence and mortality for patients with syncope.

IM 63 - 37

Issues in Cardiac Anesthesia - Annette Y. Schure, MD and Barry A. Harrison, MD

Explain the differences between electrocardiographic results in children and adults; Recognize significant pediatric cardiac arrhythmias; Treat intraoperative arrhythmias in children; Select anesthetic agents and techniques for patients with heart failure; Use diagnostic and treatment modalities to optimize perioperative outcomes for patients with heart failure.

AN 58 - 46

Cardiovascular Disease in Women - Robert B. Baron, MD

Manage a patient with hypertension who is monitoring her blood pressure at home; Summarize the guidelines for management of blood pressure issued by the Eighth Joint National Committee; Initiate screening of blood pressure and lipid profiles at appropriate ages; Describe the major findings of the SPRINT trial; List current indications for treatment with statins.

OB 64 - 04

Updates in Cardiology - Paul J. Grant, MD and Eliot C. Williams, MD

Choose the appropriate instrument to assess clinical perioperative cardiovascular risk; Identify patients who will require revascularization before undergoing noncardiac surgery; Manage the use of anticoagulants and antiplatelet agents in the perioperative setting; List the advantages and disadvantages of direct oral anticoagulants; Recommend an effective antidote for a patient taking dabigatran.

IM 63 - 34

Update in Pediatric Cardiology - Sharon E. O'Brien, MD

Identify the causes and relative prevalence of sudden explained death in athletes; Comply with nationally recommended elements of preparticipation screening; Evaluate the role of electrocardiography in preparticipation screening; Recognize the mechanisms of action and the cardiac side effects of stimulant drugs used to treat attention-deficit/hyperactivity disorder; Assess the risk for sudden unexplained death in patients considered for stimulant therapy.

PD 62 - 37

Stroke/Heart Failure - Chirantan Banerjee, MD and George J. Taylor IV, MD

Recognize signs of cardiac etiology of an ischemic stroke; Determine the cardiac etiology of stroke and categorize its risk; Improve cardiac evaluation in acute stroke patients; Develop an effective pharmacologic approach to prevent or reduce readmissions for end-stage heart failure; Interpret the results of the Digitalis Investigation Group trial.

IM 64 - 03

Cardiovascular Disease (CVD): Keys to Prevention - Michael Ozner, MD, Carl J. Lavie Jr, MD and Natalie Castro, MS

FP 65 - 21
