*Special Association accreditation may vary. See website.

Pediatric and Adolescent Gynecology - Beth L. Schwartz, MD
Define normal menstrual parameters in adolescents; Recognize common causes of abnormal uterine bleeding in adolescents; Identify the characteristics of an anovulatory menstrual cycle; Perform an appropriate workup for abnormal uterine bleeding; Choose an appropriate treatment option for an adolescent with abnormal uterine bleeding.
PD 63 - 31

Urinary Tract Infection (UTI)/Proteinuria - Richard S. Engel, MD and Laura S. Hesemann, MD
Diagnose UTI in infants and children from 2 mo to 2 yr of age; Evaluate the evidence on antibiotic prophylaxis for UTI; Discuss the pathophysiology of proteinuria and identify the main types of proteinuria; Recognize limitations of the office dipstick urinalysis for identification of proteinuria; Order appropriate tests to evaluate the patient with persistent proteinuria.
PD 63 - 32

Update on Infectious Disease - Katherine K. Hsu, MD
Appropriately vaccinate adolescents against meningococcal disease; Follow guidelines for age-appropriate administration of vaccines against tetanus, diphtheria, and pertussis; Cite the rationale behind the schedule of vaccination against human papillomavirus; Counsel patients about prevention of transmission of Zika virus infection; Identify individuals for whom testing for Zika virus infection is indicated. QUALIFIES FOR INFECTIOUS DISEASE
PD 63 - 33

Cytomegalovirus Infection/Human Immunodeficiency Virus Infection - David W. Kimberlin, MD and Nadia L. Dowshen, MD
Recognize the risk for maternal transmission of cytomegalovirus (CMV) and the "90-10 rule" for fetal sequelae of CMV infection; Test infants for audiologic sequelae of congenital cytomegalovirus infection; Implement current recommendations for treatment of congenital cytomegalovirus infection; Order and interpret the results of appropriate tests when human immunodeficiency virus infection is included in the differential diagnosis; Screen adolescent boys and girls for human immunodeficiency virus infection. QUALIFIES FOR INFECTIOUS DISEASE
PD 63 - 34

Update on Cultural Competency - Marissa Raymond-Flesch, MD and Ilana M. Sherer, MD
Advise patients about requirements of the Deferred Action for Childhood Arrivals (DACA) program; Identify issues that are problematic for immigrant patients or children of immigrant parents; Outline the stages of gender development; Educate parents of gender-variant children about health risks; Counsel gender-variant patients and their parents to facilitate social transition and family acceptance. QUALIFIES FOR ETHICS, CULTURAL SENSITIVITY AND LINGUISTICS
PD 63 - 35

Update on ADHD - Barbara J. Howard, MD
Discuss the pitfalls associated with accurately diagnosing ADHD; Utilize stimulant medications first-line as treatment for school-age children and adolescents with ADHD; Identify appropriate situations for the use of nonstimulant medications; Recognize and manage side effects of ADHD medications; Review evidence-based interventions that complement pharmacologic management of ADHD.
PD 63 - 36
Pediatrics Review
