**Special Association accreditation may vary. See website.*

Liver: Part 1 - Sonali Paul, MD, Dina Halegoua-De Marzio, MD and David A. Sass, MD

Counsel patients with NAFLD about lifestyle modifications for halting and reversing liver damage; Prescribe antiobesity pharmacotherapy for appropriate patients with NAFLD; Utilize laboratory tests and imaging to identify patients with, or at risk for, NAFLD; Discuss current and emerging treatments for NASH and advanced liver fibrosis; Summarize the evolution of the system for allocating and distributing livers for transplantation within the United States.

GE 34 - 01

Hepatology Updates - Robert Fontana, MD and Valentina Medici, MD

Optimize treatment of patients with suspected acetaminophen overdose; Apply the principles of critical care in patients with acute liver failure; Implement strategies to treat cerebral edema in patients with acute liver failure; Provide effective options for treatment of ascites in patients with cirrhosis; Maximize the value of surveillance for liver cancer in patients with cirrhosis.

IM 67 - 04

Constipation/Nonalcoholic Fatty Liver Disease - Jenifer R. Lightdale, MD

List the common presentations of and diagnostic criteria for functional constipation; Describe the physiology of normal defecation; Treat children with functional constipation; Differentiate nonalcoholic fatty liver disease from other causes of elevated transaminases in children; Counsel families on reversing nonalcoholic fatty liver disease through weight loss.

PD 66 - 15

IBD and Liver Disease/Perianal Crohn Disease - Catherine T. Frenette, MD and Susan Galandiuk, MD

Evaluate the elevation of liver enzyme in patients with IBD; Identify and manage liver diseases commonly associated with IBD; Prevent the reactivation of hepatitis B in patients with IBD who are on immunosuppressive therapy; Recognize the clinical features associated with PACD; Discuss treatment options for different types of PACD.

GE 34 - 15

Liver: Part 2 - Scott Fink, MD, Steven-Huy B. Han, MD and Gina Choi, MD

Explain the pathophysiology of portal hypertension and ascites; Identify and refer appropriate patients for the TIPS procedure; Evaluate and treat patients with chronic HBV infection; Optimize management of primary biliary cholangitis; Diagnose autoimmune hepatitis and individualize treatment.

GE 34 - 02

Liver Disease/IBS Constipation - Robert J. Fontana, MD, Andrew M. Cameron, MD and Ellen M. Stein, MD

Diagnose and treat immune-mediated colitis; Differentiate between drug-induced liver injury and other causes of hepatotoxicity in cancer patients; Explain the role for liver transplantation in patients with severe alcoholic hepatitis; Develop an algorithm for the treatment of constipation in patients with IBS.

GE 34 - 06

Anesthesia for Liver Transplantation - Niraj Agarwalla, DO

Select appropriate candidates for liver transplantation; Preoperatively evaluate the cardiac status of candidates for liver transplantation; Assess pulmonary vascular indices in candidates for liver transplantation; Choose invasive and noninvasive intraoperative cardiovascular monitors for patients to undergo liver transplantation; Optimize intraoperative coagulation status during liver transplantation.

AN 62 - 29

HP5 Hepatology Review

Price: \$580.00

Infectious Diseases /Vascular Syndromes -

Stephanie M. Moleski, MD, Cuckoo Choudhary, MD, Steven Ahrendt, MD and Kamron Pourmand, MD

Treat C diff colitis; Order appropriate diagnostic testing for patients with suspected SIBO; Define clinical and radiologic features of superior mesenteric artery (SMA) syndrome and median arcuate ligament syndrome (MALS); Counsel patients with SMA syndrome or MALS about available treatment options; Recognize vascular complications associated with liver disease.

GE 34 - 20

Inflammatory Bowel Disease /Fatty Liver Disease -

David P. Hudesman, MD, Jon D. Vogel, MD and Amanda Wieland, MD

Elaborate on the natural history of inflammatory bowel disease; Implement the treat-to-target management strategy for patients with inflammatory bowel disease; Provide patients with effective medical and surgical options for treatment of Crohn disease and ulcerative colitis; Maximize the use of noninvasive techniques to assess liver fibrosis in patients with fatty liver disease; Optimize treatment in patients with fatty liver disease.

GE 34 - 24

Hepatitis B Virus /Drug-induced Liver Disease -

Robert J. Fontana, MD

Analyze the results of tests to determine a patient's hepatitis B virus infection status; Elaborate on the natural course of hepatitis B virus infection in children and adults; Tailor treatment of patients to their phase of hepatitis B virus infection; Identify drug-induced liver injury in patients presenting with liver disease; Recognize the role of herbal and dietary supplements in drug-induced liver injury.

GE 35 - 04
